SUMMARY

Software engineer shipping production systems since 2023, currently building the Go API gateway layer carrying SCB Easy's 10M+ user banking platform off its legacy on-premise gateway. Strongest in backend architecture — hexagonal design, REST APIs, microservice migration — and used to owning delivery end to end.

SKILLS

Languages: Go, TypeScript, JavaScript, Ruby, Python, SQL, HTML/CSS | *Familiar:* Java, Haskell
Backend: Fiber, Gin, Ruby on Rails, Node.js, REST APIs, Microservices, Hexagonal Architecture, System Design
Frontend: React, Next.js, Vite, Tailwind CSS, MUI, TanStack Query, PWA
Infrastructure: PostgreSQL, Redis, Docker, Kubernetes, AWS, Kong API Gateway, CA Layer 7, Nginx, Supabase, Vercel, Linux
Observability & CI/CD: Prometheus, Grafana, ELK Stack, GitHub Actions, Jenkins, HashiCorp Vault, Git
Practices: Data Structures & Algorithms, TDD, SOLID, OOP, CI/CD, Agile/Scrum, AI-Assisted Development

EXPERIENCE

Associate Software Engineer *May 2025 – Present*
SCB TechX, Bangkok, Thailand (Hybrid)

API Gateway Migration — Go, Fiber, Kong, Redis, Prometheus, Kubernetes

- Moving SCB Easy's 10M+ user platform off a legacy on-premise gateway one service at a time, rather than in a single high-risk cutover — a Go token-validation and routing service running behind Kong.
- Gave the migration team per-route visibility before rollout, through the gateway's plugin system, routing engine, and observability stack (Prometheus, structured logging).
- Kept core business logic testable without standing up Kong or Redis, by structuring the service in hexagonal architecture with dependency injection and interface-driven boundaries.
- Made route changes reviewable and reversible across the migration's 30+ services, prototyping declarative config sync (Kong decK pattern: YAML definitions with diff and rollback) and per-service circuit breaking.

Inventory Asset Management Platform — Ruby on Rails, React, TypeScript, PostgreSQL, Azure AD

- Replaced manual asset tracking for six user roles with a workflow engine spanning four parallel lifecycles (request, spare, repair, return), enforcing approval chains per role and step under Azure AD SSO.
- Let asset managers pull their own reports instead of filing requests — dashboards for utilization, financial summaries, and processing efficiency with Excel/CSV export, plus an installable PWA with push notifications.

Full Stack Developer (Work-Study Scholarship) *2023 – 2025*
Chiang Mai University, Faculty of Engineering, Chiang Mai, Thailand
Owned two production web apps from requirements to containerized deployment — hexagonal architecture, Go APIs, React/TypeScript, PostgreSQL.

SD-Booking — Room Reservation System — Go, React, TypeScript, PostgreSQL, PWA, Docker

- Replaced the faculty's manual room scheduling with a real-time booking platform — conflict detection, role-based access, an admin dashboard, and mobile push notifications; still in daily use today.

Certificate Approval Workflow — Go, React, TypeScript, PostgreSQL

- Cut turnaround on every certificate request by replacing a paper process with a multi-stage approval workflow, ending manual routing between offices.

PROJECTS

FitJourney — Fitness Tracking Platform — Side Project *2026*
Next.js, Supabase, Tailwind CSS, OpenAI API, Vercel

- Replaced four separate tracking apps with one self-hosted PWA — workout logging, nutrition, body metrics, and AI meal scanning on Supabase (auth, DB, storage), deployed to Vercel edge with analytics dashboards.

Twitch Chat TTS Bot — Side Project *2026*
Bun, Microsoft Edge TTS, tmi.js, FFplay

- Kept a Twitch TTS bot running unattended through high-volume chat — audio piped straight from memory to playback with no disk I/O, plus a priority queue, anti-spam filtering, and automated OAuth refresh.

EDUCATION

Bachelor of Engineering in Computer Engineering *Graduated 2025*
Chiang Mai University Second-Class Honours GPA: 3.32/4.00
Thesis: *LongPlan* — study plan validator enforcing curriculum rules via graph algorithms (topological sort, cycle detection); Go and React.
