PROFESSIONAL EXPERIENCE

Associate Software Engineer
May 2025 – Present

SCB TechX · Bangkok, Thailand (Hybrid)

Agentic AI Platform — FinOps Engine | Go, Kafka, OpenTelemetry, PostgreSQL, AWS, Next.js, TypeScript — Sep 2026 – Present

- Ran discovery for the FinOps module of SCB TechX's agentic AI platform: wrote the requirements, module spec, and service topology for the product owner and engineering manager, and made the case that budget enforcement must stay inside the platform.
- Designed and built, with two teammates, a Go cost engine that ingests OpenTelemetry LLM-usage signals from Kafka, prices each call with exact integer money at the price and FX rate in force, and attributes it to the customer's organisation tree; redelivery-safe, with retry and dead-letter topics, multi-tenant on PostgreSQL with AWS IAM database authentication.
- Built the platform side of the integration: a typed reports port in the Next.js console and an AI cost dashboard that drills from organisation to team, project, workflow, run, and step-level trace (in review).
- Set the team's engineering practices: architecture decision records, test-first development with a coverage gate, lint-enforced hexagonal layering, and an AI-assisted pull-request review workflow (multiple reviewer agents plus a verifier) used on teammates' changes.

API Gateway Migration | Go, Fiber, Kong, Redis, PostgreSQL, Prometheus, Kubernetes — 2025 – Sep 2026

- Developed a Go service (Hexagonal Architecture, interface-driven design) for token validation, authentication, and request routing behind Kong, as part of a phased migration from a legacy on-premise gateway toward SCB Easy's 10M+ user platform; handed over to the team in Sep 2026 as the migration continued.
- Designed the plugin system, routing engine, and observability (Prometheus metrics, structured logging), and prototyped declarative config sync (Kong decK pattern: YAML routes with diff and rollback) and per-service circuit breaking, targeting safe phased rollout across the migration's 30+ services.

Enterprise Asset Management Platform | Ruby on Rails, React, TypeScript, PostgreSQL, Azure AD, Docker — 2025

- Designed and developed a database-driven workflow engine for four parallel request lifecycles with per-role approval chains, role-based access control for six user roles with Azure AD single sign-on, and reporting dashboards with Excel/CSV export.

Full Stack Developer (Work-Study Scholarship)
2023 – 2025

Chiang Mai University, Faculty of Engineering · Chiang Mai, Thailand

- Designed and deployed two production web applications used across the faculty, owning the full lifecycle from stakeholder requirements through containerized deployment (Go, React/TypeScript, PostgreSQL, hexagonal architecture), including a multi-stage certificate approval workflow that digitized a paper-based process.
- Developed SD-Booking, a real-time room reservation system with role-based access, booking conflict detection, an admin dashboard, and mobile push notifications — adopted by the faculty for daily scheduling and still in active use today.

EDUCATION

Bachelor of Engineering in Computer Engineering
Graduated 2025

Chiang Mai University · Second-Class Honours · GPA 3.32/4.00

SKILLS

Languages: Go, TypeScript, JavaScript, Ruby, Python, SQL, HTML/CSS

Frameworks: Fiber, Gin, Echo, Ruby on Rails, React, Next.js, Node.js, Tailwind CSS, TanStack Query

Infrastructure: PostgreSQL, Redis, Kafka, Docker, Kubernetes, AWS (EKS, RDS, Secrets Manager), Kong API Gateway, Supabase, Vercel, Linux

Observability & Tools: OpenTelemetry, Prometheus, Grafana, ELK Stack, Git, GitHub Actions, HashiCorp Vault

Practices: System Design, Data Structures & Algorithms, REST APIs, Microservices, CI/CD, TDD, Agile/Scrum

Spoken: Thai (Native), English (Intermediate)
