PROFESSIONAL EXPERIENCE

Associate Software Engineer

May 2025 – Present

SCB TechX, Bangkok, Thailand (Hybrid)

- Developed a Go microservice handling token validation, authentication, and request routing for SCB Easy's 10M+ user platform, integrated behind Kong as part of a phased migration away from a legacy on-premise gateway.
- Designed the plugin system, routing engine, caching layer, and observability infrastructure for the new gateway, with Prometheus metrics and structured logging ready for production rollout.
- Designed and developed an enterprise asset management platform with multi-stage approval workflows, role-based access control for six user roles, financial reporting dashboards, and real-time notifications, used across the organization.
- Leveraged AI-assisted development tools across code generation, unit-testing, refactoring, architecture review, and documentation to accelerate delivery on complex features.

Full Stack Developer (Work-Study Scholarship)

2023 – 2025

Chiang Mai University, Faculty of Engineering, Chiang Mai, Thailand

- Designed and deployed two production web applications serving 500+ active users, owning the full lifecycle from stakeholder requirements through containerized deployment.
- Developed a real-time room reservation system with role-based access, admin dashboard, and mobile push notifications, adopted by the faculty for daily scheduling.
- Developed a multi-stage certificate approval workflow that digitized a paper-based process, reducing turnaround from days to hours.
- Applied clean architecture and test-driven development across all projects, building RESTful APIs in Go with React/TypeScript frontends and PostgreSQL.

PROJECTS

API Gateway Microservice — SCB TechX

2025 – Present

Go, Fiber, PostgreSQL, Redis, Kong, Prometheus, Kubernetes

- Built a token service and routing migration layer in Go behind Kong, designed to incrementally replace a legacy CA Layer 7 gateway — with tooling to diff current and target route configurations to support safe phased rollouts.
- Implemented response caching, circuit breakers per backend service, and retry with exponential backoff to improve reliability under high traffic.
- Developed a declarative config sync system based on the Kong deck pattern, using YAML route definitions with diff, rollback, and GitOps-style config management.

Inventory Asset Management System — SCB TechX

2025

Ruby on Rails, React, TypeScript, PostgreSQL, Azure AD, Docker

- Built a database-driven workflow engine to handle complex request lifecycles across four parallel workflows (request, spare, repair, return), enforcing approval chains per role and step.
- Implemented role-based access control for six user roles with Azure AD single sign-on.
- Built reporting dashboards aggregating asset requests, utilization, financial summaries, and processing efficiency, with Excel and CSV export.
- Developed the frontend with reusable components, type-safe API clients generated from the backend specification, and full offline-capable PWA support with push notifications.

SD-Booking — Room Reservation System — Chiang Mai University

2023 – 2024

Go, React, TypeScript, PostgreSQL, PWA, Docker

- Built a real-time room booking platform serving 500+ faculty users with role-based access, booking conflict detection, and mobile push notifications, adopted for daily operations.

FitJourney — Fitness Tracking Platform — Side Project

2026

Next.js, Supabase, Tailwind CSS, OpenAI API, Vercel

- Built a full-stack fitness app with workout logging, nutrition tracking, body metrics monitoring, and AI-powered food image recognition for automated meal scanning.
- Designed analytics dashboards with performance trends and calorie tracking. Deployed as a monorepo with Supabase backend and Vercel frontend.

Twitch Chat TTS Bot — Side Project

2026

Bun, Microsoft Edge TTS, tmi.js, FFplay

- Developed a real-time Twitch chat-to-speech bot that streams audio directly from memory with minimal resource usage, supporting Thai and English neural voices.
- Implemented message priority queue, anti-spam protection, and automated authentication flow.

EDUCATION

Bachelor of Engineering in Computer Engineering

Graduated 2025

Chiang Mai University

Second-Class Honours GPA: 3.32/4.00

Thesis: *LongPlan* — Study plan validator using graph algorithms (topological sort, cycle detection) and curriculum rule enforcement. Built in Go with React frontend.

SKILLS

Languages: Go, TypeScript, JavaScript, Ruby, Python, SQL, Java, HTML/CSS, Haskell

Frameworks: Fiber, Gin, Ruby on Rails, React, Next.js, Node.js, Vite, Tailwind CSS, MUI, TanStack Query

Infrastructure: PostgreSQL, Redis, Docker, Kubernetes, AWS, Kong API Gateway, CA Layer 7, Nginx, Supabase, Vercel, Linux

Observability: Prometheus, Grafana, ELK Stack

Tools: Git, GitHub Actions, Jenkins, HashiCorp Vault

Practices: System Design, Data Structures & Algorithms, REST APIs, Microservices, CI/CD, TDD, SOLID, OOP, Agile/Scrum
