[Portfolio](#)

Technical Skills

Languages	Go (primary), TypeScript, JavaScript, Ruby, Python, SQL, HTML/CSS, Haskell, Java, C++
Backend	Fiber/Gin, Ruby on Rails, NodeJS, RESTful APIs, gRPC, Microservices Architecture, Rust (Intermediate), Haskell
Frontend	React, TypeScript, Vite, Tailwind CSS, PWA, TanStack, Shadcn, NextJS
API Gateway	Kong API Gateway Best Practices, API Routing, Rate Limiting, Zero-Downtime Deployment
Databases	PostgreSQL, Redis, Database Design, Indexing, Database-Driven Architecture
Cloud/DevOps	Kubernetes, Docker, AWS, Jenkins CI/CD, HashiCorp Vault, Linux
Monitoring	Prometheus, Grafana, Kibana (ELK Stack)
AI Agent Tooling	Prompt Engineering, Agentic Workflow Design
Practices	Agile/Scrum, TDD, Code Review, Git, AI-Driven Development, Software Development Lifecycle (SDLC), Functional Programming

Professional Experience

Associate Software Engineer May 2025 – Present
SCB TechX, Bangkok, Thailand (Hybrid)

- Designed and developed an API Gateway microservice in Go (Fiber/FastHTTP) to replace legacy CA Layer 7 gateway on-premise, preserving complex routing logic while integrating with Kong upstream, enabling zero-downtime deployment for SCB Easy (10M+ users).
- Architected the gateway with hexagonal architecture and DDD, decoupling routing, authentication, and logging into SOLID-aligned domains for independent testing and safer deployments.
- Integrated AI agent tools as a core part of the engineering workflow, applying them across code generation, refactoring, architecture review, and documentation to accelerate delivery on complex features.
- Designed and developed internal enterprise tools, including an Inventory Asset Management platform with asset requests, RBAC, financial reporting, and centralized asset data.
- Maintained internal service tools such as Overtime Request and Employee Timesheet workflows, streamlining HR operations across the organization.

Full Stack Developer (Work-Study Scholarship) 2023 – 2025
Chiang Mai University, Faculty of Engineering, Chiang Mai, Thailand

- Designed and deployed production web applications serving 500+ active users, from stakeholder requirements through Docker-based deployment.
- Built RESTful backend APIs in Go (Fiber) with React/TypeScript frontend and PostgreSQL, consistently applying hexagonal architecture and TDD.
- Developed *SD-Booking* (room reservation with real-time PWA notifications), *SD-Letter* (multi-stage certificate approval workflow), and *LongPlan* (algorithmic study-plan validator using graph algorithms).

Key Projects

Custom Hybrid API Gateway Solution 2025 – Present
Go • Fiber/FastHTTP • PostgreSQL • Redis • Kong • Kubernetes • Microservice
Bridged on-premise CA Layer 7 logic with cloud-native Kong, enabling incremental deployment with zero downtime.

Inventory Asset Management System 2025
Ruby on Rails • React • PostgreSQL • REST APIs • Docker
Enterprise asset-tracking platform with request/return workflows, role-based access control

SD-Booking (Room Reservation System) 2023 – 2024
Go • React • TypeScript • PWA • Webhooks
Real-time room booking platform with role-based access, admin dashboard, and push notifications via webhooks.

Education

Bachelor of Engineering in Computer Engineering
Chiang Mai University
Thesis: *LongPlan – Study Plan Validator (algorithmic validation with graph algorithms and curriculum rule enforcement)*

Graduated 2025
Second-Class Honours GPA: 3.32/4.00
